

Walkthrough

Function 1: The user is getting on the fantasy league dashboard to see how their last contest went because they couldn't remember, when their friend asked about it. They were able to click to see which games they won or lost.

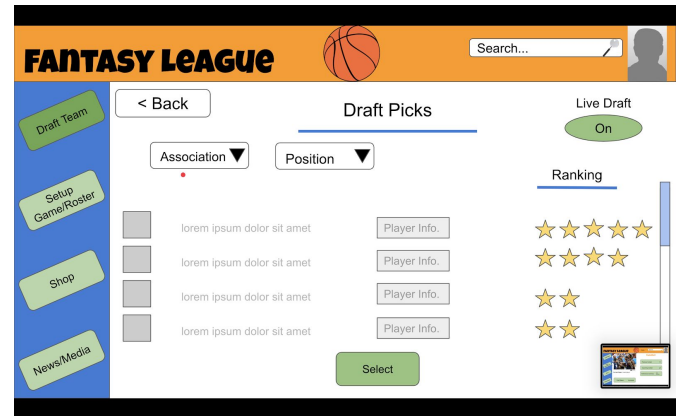

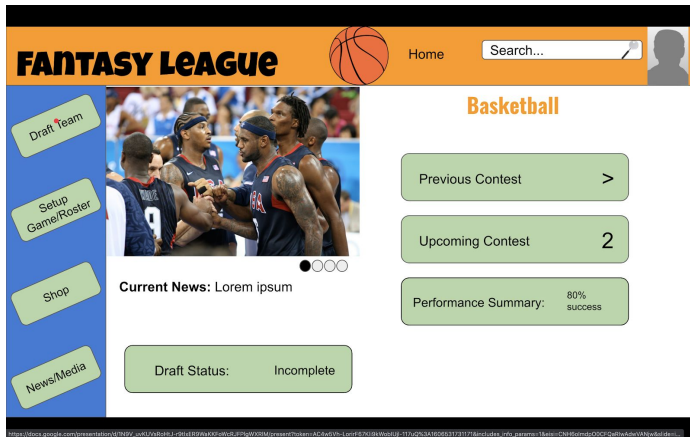

The user is clicking through the images to see what images are displayed in the carousel, anticipating what is popping up next.

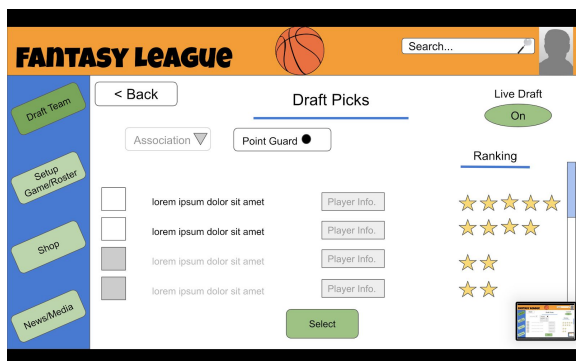

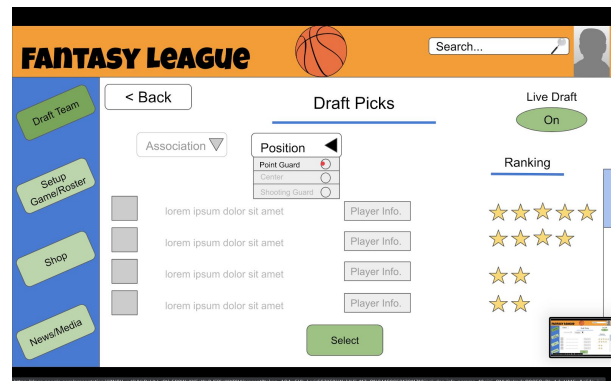

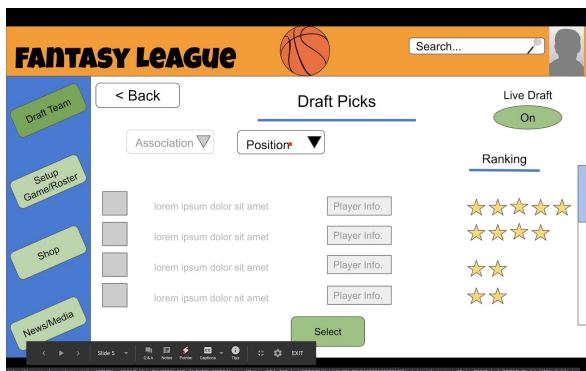

They then click on the previous contest button and are able to view how many they lost or won in the past. When done they press the back button and go back to the main page. The user regains their memory and can go back and tell their friend they won their last contest.

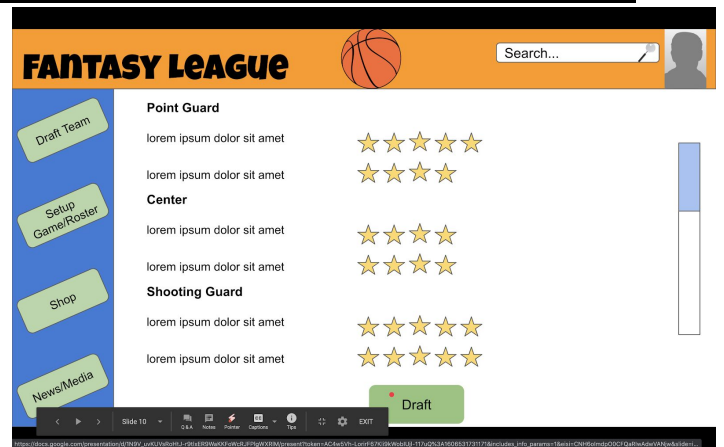

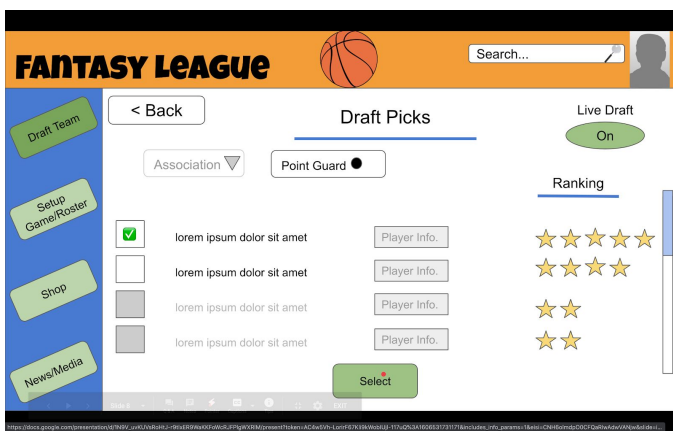

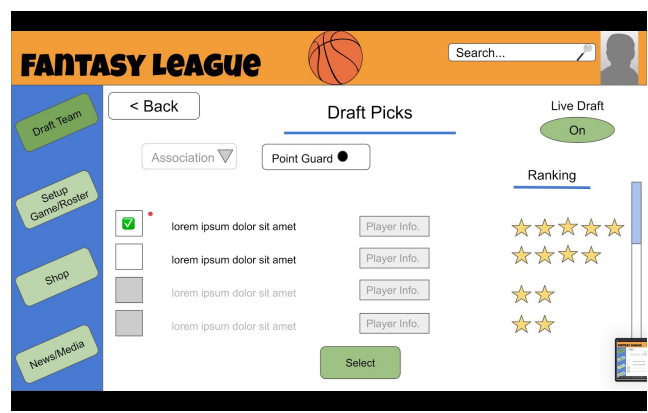

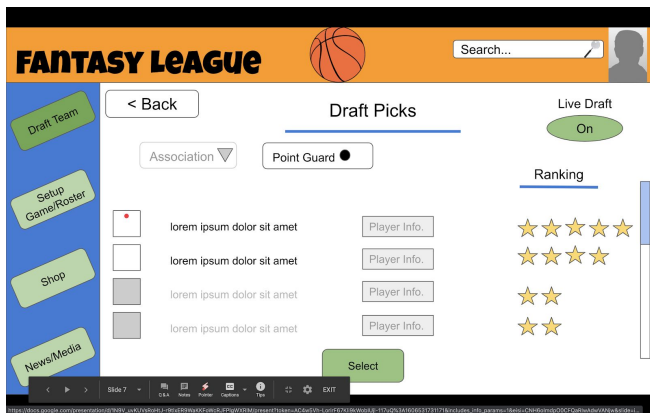

Function 2: The user has to hurry up and make it home from work in order to make the draft in time and get their best picks. They get on the Fantasy League site and start filling out their draft.

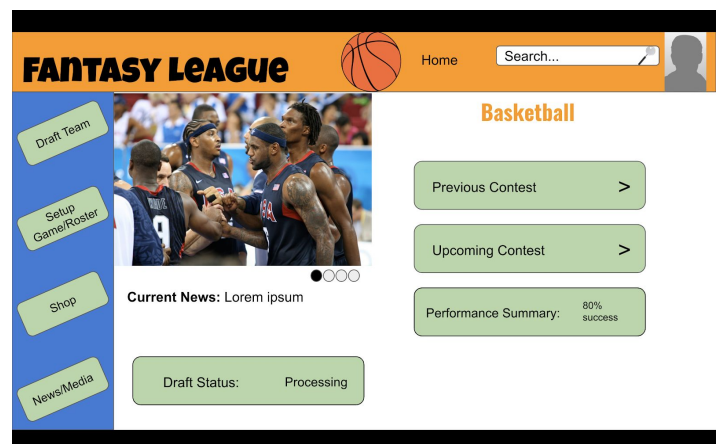

The user clicks on the draft tab and is taken to the screen, where they can fill out their draft.

They click on the position drop down and are able to select that they want to draft point guards by selecting the radio button.

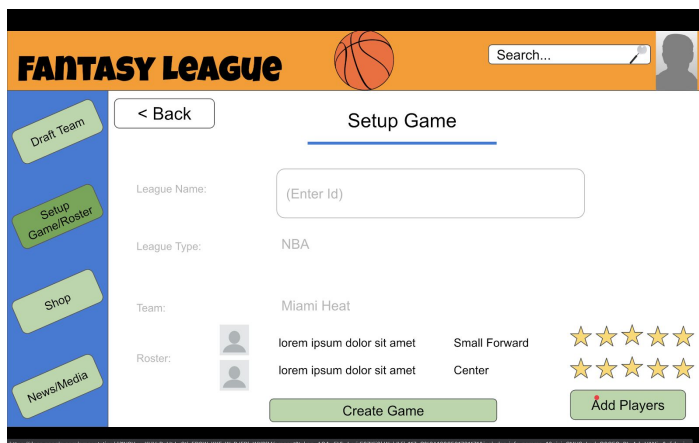

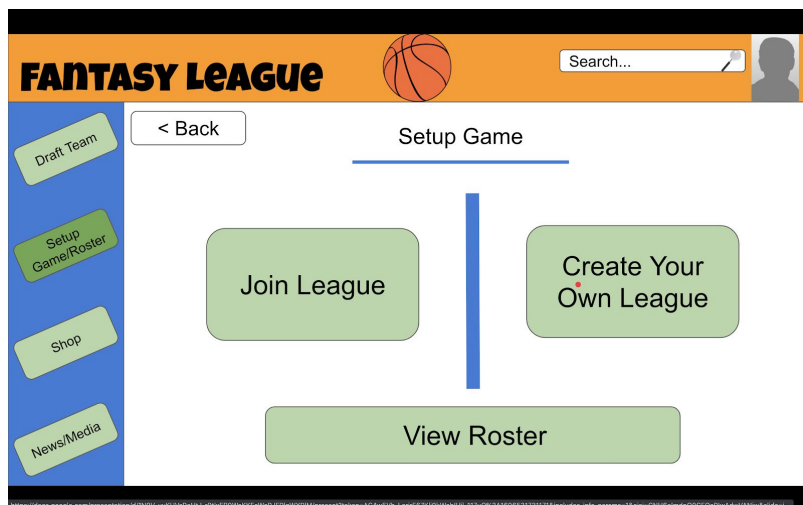

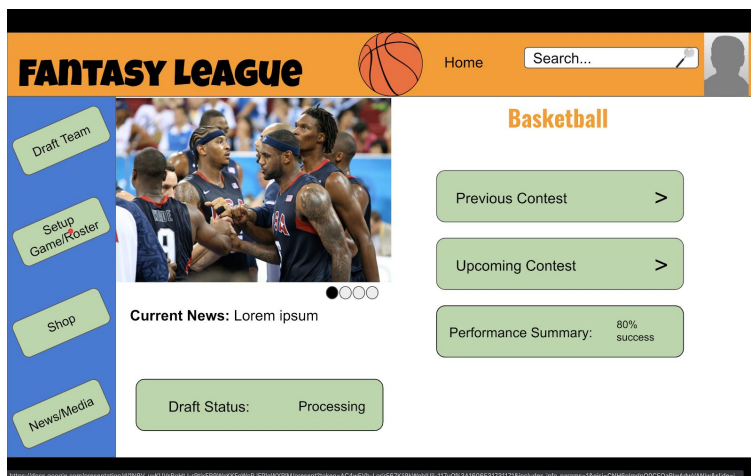

The user decided that they wanted to select the first player to draft in the checkbox and they were shown that their choice was highlighted. They then click on the select button and are taken to their draft list, where they are able to finalize their draft picks.

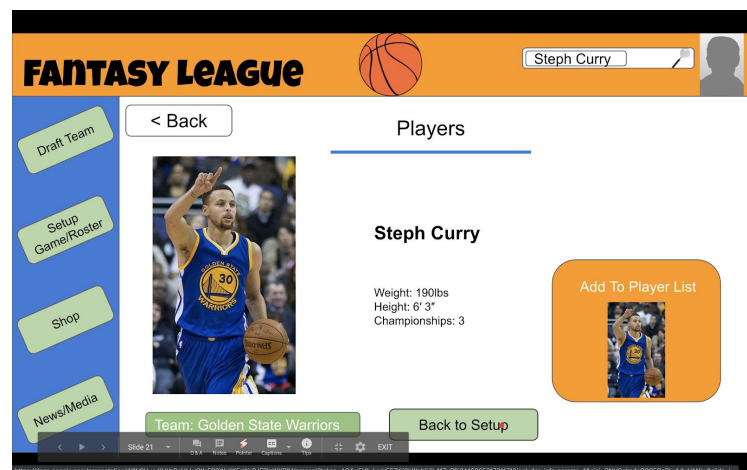

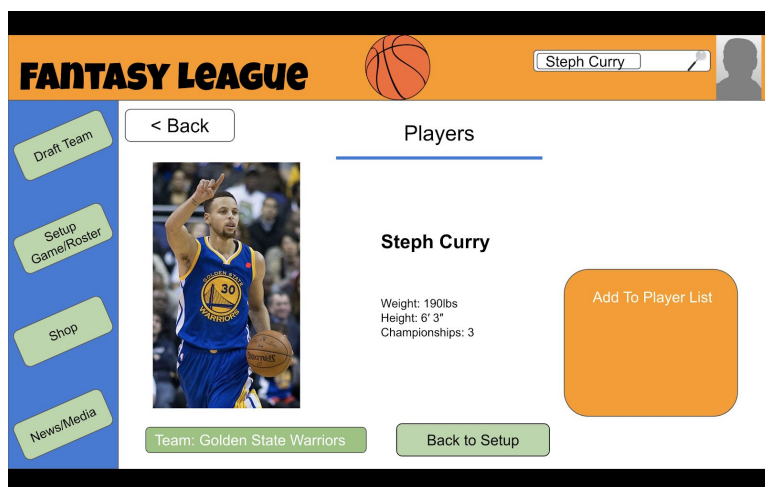

They are taken to the home screen where they are notified their draft was successful and are able to see that their draft status is “processing”, after selecting the ok button (getting their top picks on time).

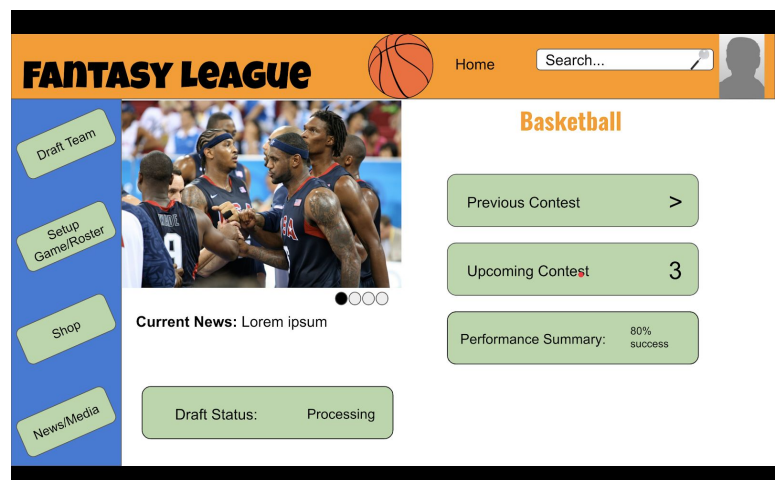

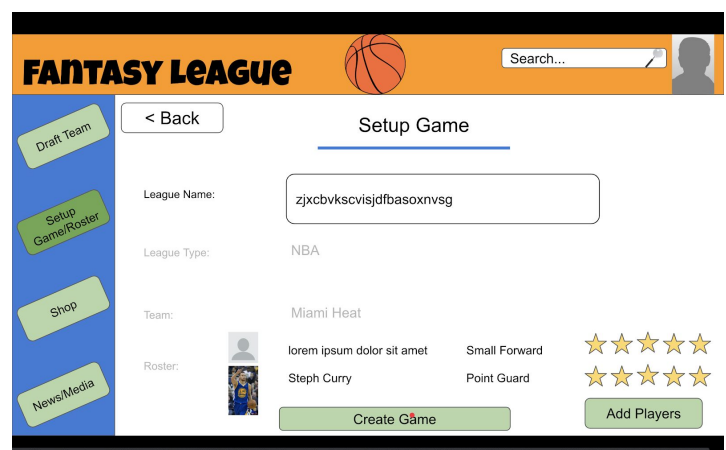

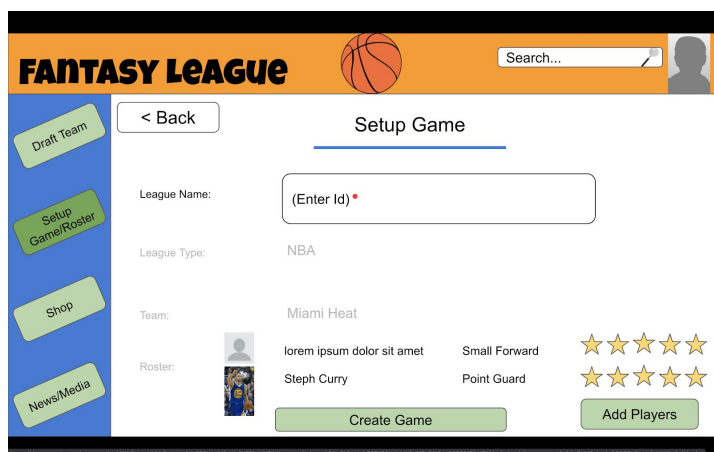

Function 3: Friends are sitting on a couch and watching some tv, when they see a commercial for a new upcoming basketball game coming up. One of the friends immediately jumps up and goes to the Fantasy League site, where they are able to create a league of their own and select specific players from the roster to build a team.

The user clicks on the setup game button from the home page and are taken to the setup page, where they click on the create league button. They then migrate to the add players button and click on that to add another player to their list.

The user is taken to the player page after they type in the player that they want is Stephen Curry. They see the details about him and select that they want to add him to the player list by drag and drop (by clicking on his image). Once they are done with that they select that they want to be taken back to the roster.

The user is taken back to the setup page and they are able to enter a name for their league in the text entry box. The player that they selected can be seen added to the player list and are able to then select the create game button. They are taken back to the main page and notified that their league creation was successful and can see that they have 3 upcoming games to view. The user was able to successfully create a team of their own and add players to play in next weeks game.
